

How itsRIGHTtime manage all the activities

- When a new organization registers, a root user is automatically created with the organization's details.
- Root User have same user Id as of organization Id
- The data of the company is stored in their database
- For an organisation : Root user can add users in the batch, we will provide a templet in which the organization can give the data in excel format and the those users will be added in the batch, and send their userId & password to their mail.

## Type of User

1. **Trial Root User:** Organizations with access to the product for a limited period to assess its fit for their needs before committing to a subscription or purchase.
2. **Root User:** Manages the entire organization, including permissions, employee management, and service access. Can create up to five sub-root users.
3. **Sub-Root User:** Has elevated access within the organization, can manage specific aspects but has restricted permissions compared to the root user.
4. **Manager User:** Oversees specific departments or teams, manages day-to-day operations, and can assign tasks to standard users.
5. **Standard User:** Regular employees with access to specific tools and data required for their roles. Their permissions are controlled by managers.
6. **Guest User:** Temporary or external users with limited access, typically for specific tasks or time-bound activities.
7. **Client User:** Individuals or entities who are clients of the organization but not employees. They may have access to specific services or data related to their engagement with the organization.
8. **Partner User:** External collaborators or partners who need access to certain organizational resources or information but are not direct employees or clients. Their access is typically limited to collaborative activities.
9. **Freemium User:** General public users who can access a limited version of your products for free. This type of user might have restrictions on features or usage to encourage upgrades to a paid version.
10. **Trial User:** General public users with access to the product for a limited time to evaluate features before making a purchase decision.
11. **Paid User:** Users who have transitioned from Freemium or Trial status to a paid subscription. This category includes individuals or organizations that have purchased the product and now have access to additional features or services.

Databases: tables

**irt\_all:** organization, user, sessions, address, verification
